Technical Description

The Equipment Under Test (EUT) is a 2.4GHz RC car operating from 2410-2475MHz with 1MHz channel spacing. The EUT is powered by 6X1.5V AA batteries. After switch on the EUT and paired with Controller, the RC Car can be controlled to move forward, backward, turn left/right.

The brief circuit description is listed as below:

- 1) U1 acts as 2.4GHz RF Module Circuit (RF24G228).
- 2) Y2 is 12MHz crystal oscillator providing clock for U1.
- 3) U3 acts as Voltage Regulator (CP6201).
- 4) U4 and U5 act as Motor Driver (CP2120).

Antenna Type: Internal antenna

Antenna Gain: 0dBi

Nominal rated field strength: 71.2dBµV/m at 3m

Maximum allowed field strength of production tolerance: +/- 5dB

RF24G228 Datasheet Revision 1.1

RF24G228

Low Cost 2.4GHz Radio Transceiver

GENERAL DESCRIPTION

The RF24G228 is a low-cost, fully integrated CMOS RF transceiver, GFSK data modem, and packet framer, optimized for use in the 2.4 GHz ISM band. It contains transmit, receive, RF synthesizer, and digital modem functions, with few external components. The transmitter supports digital power control. The receiver utilizes extensive digital processing for excellent overall performance, even in the presence of interference and transmitter impairments.

The RF24G228 transmits GFSK data at approximately 6 dBm output power. The low-IF receiver architecture produces good selectivity, with sensitivity down to approx. -96 dBm@62.5Kdps. Digital RSSI values are available to monitor channel quality. On-chip transmit and receive FIFO registers are available to buffer the data transfer with MCU.

Built-in CRC, FEC, data whitening, and automatic retry/acknowledge are all available to simplify and optimize performance for individual applications. The digital baseband interface can be either 4-wire SPI or 2-wire I2C-bus. Three additional pins are available for optional reset and buffer control.

For extended battery life, power consumption is minimized all key areas. A sleep mode is available to reduce standby current consumption to just 1 uA typ. while preserving register settings. This product is available in RoHS compliant SSOP16 standard package.

Application

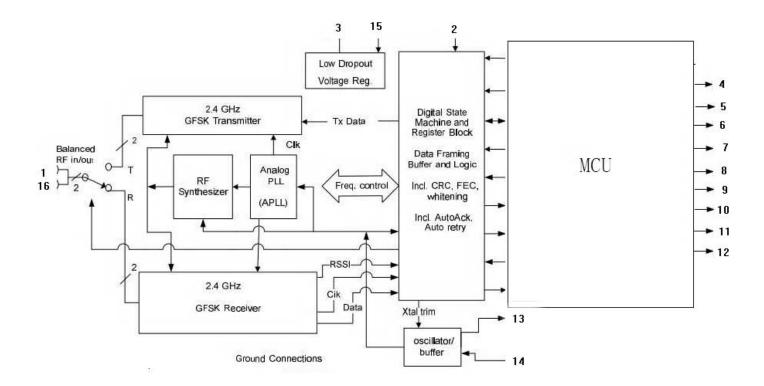

- **■** Remote controls
- Wireless keyboards and mice
- Proprietary Wireless Networks I Home automation
- Commercial and industrial short-range wireless
- Wireless voice, VoIP, Cordless headsets
- Robotics and machine connectivity

2. Absolute Maximum Ratings

Table 1. Absolute Maximum Rating

Parameter	Symbol	MIN	TYP	MAX	Unit	
Operating Temp.	T _{OP}	-40		+85	°C	
Storage Temp.	T _{STORAGE}	-55		+125	°C	
LDO_VDD, VDD_IO Voltage	V _{IN_MAX}			+3.7	VDC	
VDD pins	VDD_MAX			+2.5	VDC	
Applied Voltages to Other Pins	V _{OTHER}	-0.3		+3.7	VDC	
Input RF Level	P _{IN}			+10	dBm	

Notes:

- 1. Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Recommended operating conditions indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics section below.
- 2. These devices are electro-static sensitive. Devices should be transported and stored in anti-static containers. Equipment and personnel contacting the devices need to be properly grounded. Cover workbenches with grounded conductive mats.

3. Electrical Characteristics

Table 2. Electrical Characteristics

The following specifications are guaranteed for TA = 25 C, LDO_VDD= VDD_IO = 3.3 VDC, unless otherwise noted.

Parameter	Symbol	MIN	TYP	MAX	Units	Test Condition and Notes
Supply Voltage						
DC power supply voltage range		2.2		3.6	VDC	Input to VDD_IO and LDO_VDD pins.
Current Consumption						
Current Consumption TV	IDD_TXH		18		mA	POUT = high power setting
Current Consumption - TX	IDD_TXL		12		mA	POUT = low power setting
Current Consumption - RX	IDD_RX		17		mA	
Current Consumption IDLE	IDD_IDLE1		1.4		mA	Configured for BRCLK output running.
Current Consumption –IDLE	IDD_IDLE2		1.1		mA	Configured for BRCLK output OFF.
Current Consumption - SLEEP	IDD_SLP		6		uA	
Digital Inputs						
Logic input high	VIH	0.8		1.2	.,	
Logic input nign	VIII	VDD_IN		VDD_IN	V	
Logic input low	VIL	0		0.8	V	
Input Capacitance	C_IN			10	pF	
Input Leakage Current	I_LEAK_IN			10	uA	
Digital Outputs						
Logic output high	VOH	0.8		VDD IN	V	
		VDD_IN		_		
Logic output low	VOL			0.4	V	
Output Capacitance	C_OUT			10	pF	
Output Leakage Current	I_LEAK_OUT			10	uA	
Rise/Fall Time (SPI)	T_RISE_OUT			5	nS	
Clock Signals						
CLK rise, fall time (SPI)	Tr_spi			25	nS	Requirement for error-free register reading, writing.
CLK frequency range (SPI)	FSPI	0	12		MHz	
Overall Transceiver						
Operating Frequency Range	F_OP	2400		2482	MHz	
Antenna port mismatch	VSWR_I		<2:1		VSWR	Receive mode.
(Z0=50Ω)	VSWR_O		<2:1		VSWR	Transmit mode.

			OBS_O_4		< -65	-47	dBm	5.15 GHz ~ 5.3	5.15 GHz ~ 5.3 GHz	

Note:

- 1. The test is run at one midband frequency, typically 2460 MHz. With blocking frequency swept in 1 MHz steps, up to 24 exception frequencies are allowed. Of these, no more than 5 shall persist with blocking signal reduced to -50dBm. For blocking frequencies below desired receive frequency, in-band harmonics of the out-of-band blocking signal are the most frequent cause of failure, so be sure blocking signal has adequate harmonic filtering.
- 2. In some applications, this filter may be incorporated into the antenna, or be approximated by the effective antenna bandwidth.
- 3. Transmit power measurement is corrected for insertion loss of Balun, in order to indicate the transmit power at the IC pins.
